1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katagiri et al.
3. Katagiri et al discloses a colored composition which is a contact lens which comprises a resin and a chlorinated or brominated copper-metallophthalocyanine. The copper-metallophthalocyanine may contain 8-16 bromine atoms per molecule according to formula 1. See col. 8, lines 20-54 wherein a metallophthlaocyanine is dispersed in a polymerizable monomer. Patentee does not indicate that the polymer is transparent. However, since the compositions are methacrylate polymers or other such polymers typically used for making optical devices such as contact lens, it is probable that the polymers of Katagiri et al are transparent. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to utilize a transparent methacrylate polymer in the contact lens compositions of Katagiri et al because the compositions were intended to be pigmented and subsequently used for contact lens preparation. Nothing of an unobvious nature is seen by such a variation. It also would have been obvious to employ two species of the metallophthalocyanine disclosed as formula I with the expectation of achieving an additive effect. The species which differ only by the central metal atom are equated and are interchangeable.
4. Claim 8 is allowable over the art of record.
